Executive Education for New Leadership Roles: A Clinical Approach

William R. McNay, Mercer University

Abstract

Major changes in the business environment in the 1980s brought new emphasis on the work of executives; executives are now expected to take an active leadership role in all major organizational programs. However, executives are not fulfilling their anticipated leadership roles in many situations. This paper looks at the reasons why the problem exists and offers a unique approach to provide them with the needed learning.

To become a strong leader you have to develop new skills and self-awareness to influence and inspire those around you. And in today’s increasingly international business environment, you also need to adapt your skills and self-awareness to lead across cultures and borders. Choose from our wide range of 15 leadership programmes. INSEAD Coaching Certificate - NEW!  The Leadership Transition develops leadership capacity and prepares participants for the critical transition into strategic leadership roles. A unique learning model helps participants to increase their understanding and to close the gap between this understanding and effective action. Upcoming Sessions. Medical leadership, like other leadership roles, must have passion, courage, vision and an ability to scan the horizon for health care policies, which may affect health services directly or indirectly. Medical leaders often have the skills to look at the problems in a longitudinal sense and have a broader perspective to understand the dynamics of action. As already mentioned in this book, executives frequently join executive education programs or sign up for leadership coaching opportunities for reasons that go beyond the obvious ones of gaining additional knowledge and insights into the effective operation of business. Many executives enter these programs to pursue very personal agendas, including taking stock of their professional and personal
