Economic Growth and the Structure of Long Term Development. Proceedings of the IEA Conference held in Varenna, Italy

Publisher: Palgrave Macmillan

Abstract: Structural change and the consequent process of adjustment is one of the most pervasive features of our economies. The problems connected with long-term economic development remain very prominent in a world where the rhythm of growth is so different from country to country, and where disparities in the standards of living of nations emerge strikingly as the world becomes more interdependent. The book contains the proceedings of a conference held in Varenna, Italy in 1992. It consists of five parts, opening with a survey of the empirical evidence. It continues with papers on growth models of various extractions: new-growth theory models, Schumpetarian models, structural change models. There follows a section on growth and international trade and a further one on sustainable growth. The papers are supplemented with a record of the discussions. A concluding part is devoted to the comments and the contributions of Robert Solow, Amartya Sen, Elhanan Helpman, Luigi Pasinetti and William Nordhaus.

The World Economic Situation and Prospects 2017 is a joint product of the United Nations Department of Economic and Social Affairs (UN/DESA), the United Nations Conference on Trade and Development (UNCTAD) and the five United Nations regional commissions (Economic Commission for Africa (ECA), Economic Commission for Europe (ECE), Economic Commission for Latin America and the Caribbean (ECLAC), Economic and Social Commission for Asia and the Pacific (ESCAP) and Economic and Social Commission for Western Asia (ESCWA)). For example, structural reforms could encompass a broader use of income policy to tackle inequalities and sustain demand, as well as active labour market policies to support vulnerable or marginalized sectors of the labour market. Use the IEEE conference search to find the right conference for you to share and discuss innovation and interact with your community. What do you want to do? Select an option. With an active portfolio of nearly 1,300 standards and projects under development, IEEE is a leading developer of industry standards in a broad range of technologies that drive the functionality, capabilities, and interoperability of a wide range of products and services, transforming how people live, work, and communicate.
